

Additional Questions from

Data Visualization, AMPO GIS Working Group Webinar 5/27:

Directed to Chad Misiuk, Southeast Michigan Council of Governments

1. Catherine Tulley: Can Chad share how long it took to develop the Community Explorer? Thinking of staff time, number of staff involved, etc.
 - a. **It took ~6 months from start to finish. There were 4 staff involved - two developers and two data creators. Developer staff time was ~1000 hours but this was not the only project being worked on during those six months.**

2. Mara Kaminowitz: For the drive-time analysis what is the underlying data network you used to do the calculations?
 - a. **We used our Michigan Geographic Framework road network, which we use for all access studies. We are very fortunate in that the state of Michigan maintains that road data for us and the rest of the state. The data can be found here:**
 - i. <https://gis-michigan.opendata.arcgis.com/datasets/all-roads-v17a>
